# **DATA SHEET**

**DIESEL GENERATOR 400KW** MODEL#FDK-CC400E/H2 60HZ/1800RPM CUMMINS MODEL: KTA19-G2

#### **General Features:**

- ٠ All qualified generator sets are subjected to a comprehensive performance test which includes 50% load, 70% load, 100% load, 110% load and to check, verify that all control systems, alarm and shut-down protection.
- Equipped with battery charger and 24V high performance maintenance-free lead-acid starting batteries and connecting ٠ cables.
- Stainless galvanized zinc plates with strong corrosion-proof. ٠
- Vibration isolators between the engine/alternator and base frame.
- Equipped with industrial silencer and flexible exhaust hose.
- Designed to comply with ISO8528/GB2820.
- Powered by Cummins engine and coupled with Stamford alternator.
- Water jacket preheater, oil heater and double air cleaner, etc. are available.

FDR Diesei Generator Set	Dala		
Genset Model	FDK-CC400E/H2	Engine Make	Cummins
Prime Power	360KW/454KVA	Engine Model	KTA19-G2
Standby Power	400KW/500KVA	Alternator model	Stamford HCI444FS
Output Frequency / Rated speed	60Hz/1800rpm	Control System	DSE7320
Rated Voltage	230V/400V	Phase	Three

#### FDK Diesel Generator Set Data

(1) Prime power: The rating is available for an unlimited of annual operating hours in variable load applications, in accordance with ISO8528-1.A 10% overload is available for a period of 1 hour within 12-hour period of operation, in accordance with ISO 3046-1.

(2) Standby power: The rating is applicable for supplying emergency power in variable load applications for up to 200 hours per year in accordance with ISO8528-1. Overload is not allowed.

(3) Rated voltage: available with customer requirement.

#### Engine Specifications (DETAILED in APPENDIX)

<u> </u>	•	<u>.</u>		
Engine Model	KTA19-G2	Aspiration	Turbo-charged	
Engine Manufacturer	Cummins	Bore x Stroke (mm x mm)	159×159	
	(CCEC CHINA)	Displacement	18.9L	
Cylinder quantity	6	Compression Ratio	13.9:1	
Cylinder Arrangement	In-line	Prime power / Speed (KW/RPM)	392/1800	
Cycle	4	Standby power/ Speed (KW/RPM)	448/1800	

CE

Type Injection System	Direct injection
	Cummins PT
Piston Speed	9.5m/s
Friction Energy Output	63kw
Total Lubrication System Capacity (L)	50

		0.						
Fuel Consumption	at	100%	load	98 at 1800rpm				
(L/HOUR)								
Starter motor 24V								
Low idle				675-775rpm				
Coolant Capacity (L)				30L				

#### Alternator Specifications

Alternator model	HCI444FS	Num
Alternator manufacturer	STAMFORD	Rate
Exciter type	Single bearing, Brushless,	
	Self-excited	Powe
Rated output prime power	456KVA	Volta
Rated speed	18500 rpm	Insula
Rated frequency	60Hz	Prote

Number of phase	3
Rated voltage	440V (Available with
	custom requirements)
Power factor	0.8
Voltage regulation NL-FL	≤±1%
Insulation grade	н
Protection grade	IP23

Alternator option: Leroy Somer, MECC, Marathon, Engga, Faraday

#### Control System DSE7320 (DETAILED in INSTRUCTION)

DSE7320 is an advanced control module based on micro-processor, containing all necessary functions for protection of the genset and the breaker control. It can monitor the mains supply, breaker control and automatically start the engine when the mains are abnormal. Accurately measure various operational parameters and display all values and alarms information on the LCD. In addition, the control module can automatically shut down the engine and indicate the engine failure.

#### FEATURES

- Microprocessor control, with high stability and credibility.
- Monitoring and measuring operational parameters of the mains supply and genset. ٠
- Indicating operation status, fault conditions, all parameters and alarms.
- Multiple protections; multiple parameters display, like pressure, temp. etc.
- Manual, automatic and remote work mode selectable.
- Real time clock for time and date display, overall runtime display, 250 log entries.
- Overall power output display.
- Integral speed/frequency detecting, telling status of start, rated operation, overspeed etc.
- Communication with PC via RS485 OR RS232 interface, using MODBUS protocol.

#### Soundproof Enclosure Specification

FDK silent generator is designed by professional acoustic engineers based on years of experience. Now we can make the noise of the generator less than 80-85dB(A) at 1m, or 70-75dB(A) at 7m, 60-65dB(A) at 15m.

#### **FEATURES**

- ٠ Multi-way air intake and exhaust guarantee the power performance of the generator.
- Large-scale impedance combined type silencer effectively reduce noise of the generator.
- Internal high performance rubber damper and flexible materials reduce vibration.
- Base mounted fuel tank supports the generator running for 8 hours.

ISO9001:2008 FDK reserves the right to change the specifications and designs without noice.

#### **Sales Promises**

- FDK provides a full line of brand new and high quality products. Each and every unit is strictly factory tested before ۵ shipment.
- Quality warranty is according to our standard conditions: 12 months from BL date or 1000 running hours, whichever comes first.
- Service and parts are available from FDK or distributors in your location.
- FDK guarantee use BRAND NEW & GENUINE MACHINE.

CONVERSIONS: (Li

(Litres = U.S. Gal x 3.785)

(Engine kWm = BHP x 0.746)

P x 0.746) (U.S. Gal = Litres x 0.2642)

(Engine BHP = Engine kWm x 1.34)

Data shown above represent gross engine performance capabilities obtained and corrected in accordance with ISO-3046 conditions of 100 kPa (29.53 in Hg) barometric pressure [110 m (361 ft) altitude], 25 °C (77 °F) air inlet temperature, and relative humidity of 30% with No. 2 diesel or a fuel corresponding to ASTM D2. See reverse side for application rating guidelines.

The fuel consumption data is based on No. 2 diesel fuel weight at 0.85 kg/litre (7.1 lbs/U.S. gal).

Power output curves are based on the engine operating with fuel system, water pump and lubricating oil pump; not included are battery charging alternator, fan, optional equipment and driven components.

## POWER RATING APPLICATION GUIDELINES FOR GENERATOR DRIVE ENGINES

These guidelines have been formulated to ensure proper application of generator drive engines in A.C. generator set installations. Generator drive engines are not designed for and shall not be used in variable speed D.C. generator set applications.

**STANDBY POWER RATING** is applicable for supplying emergency power for the duration of the utility power outage. No overload capability is available for this rating. Under no condition is an engine allowed to operate in parallel with the public utility at the Standby Power rating.

> This rating should be applied where reliable utility power is available. A standby rated engine should be sized for a maximum of an 80% average load factor and 200 hours of operation per year. This includes less than 25 hours per year at the Standby Power rating. Standby ratings should never be applied except in true emergency power outages. Negotiated power outages contracted with a utility company are not considered an emergency.

**<u>CONTINUOUS POWER RATING</u>** is applicable for supplying utility power at a constant 100% load for an unlimited number of hours per year. No overload capability is available for this rating. <u>PRIME POWER RATING</u> is applicable for supplying electric power in lieu of commercially purchased power. Prime Power applications must be in the form of one of the following two categories:

#### UNLIMITED TIME RUNNING PRIME POWER

Prime Power is available for an unlimited number of hours per year in a variable load application. Variable load should not exceed a 70% average of the Prime Power rating during any operating period of 250 hours.

The total operating time at 100% Prime Power shall not exceed 500 hours per year.

A 10% overload capability is available for a period of 1 hour within a 12 hour period of operation. Total operating time at the 10% overload power shall not exceed 25 hours per year.

#### LIMITED TIME RUNNING PRIME POWER

Prime Power is available for a limited number of hours in a non-variable load application. It is intended for use in situations where power outages are contracted, such as in utility power curtailment. Engines may be operated in parallel to the public utility up to 750 hours per year at power levels never to exceed the Prime Power rating. The customer should be aware, however, that the life of any engine will be reduced by this constant high load operation. Any operation exceeding 750 hours per year at the Prime Power rating should use the Continuous Power rating.

#### **Reference Standards:**

BS-5514 and DIN-6271 standards are based on ISO-3046.

#### **Operation At Elevated Temperature And Altitude:**

The engine may be operated at:

1800 RPM up to 5,000 ft (1525 m) and 104  $^{\rm o}{\rm F}$  (40  $^{\rm o}{\rm C})$  without power deration.

1500 RPM up to 4,300 ft (1310 m) and 104  $^{\rm o}{\rm F}$  (40  $^{\rm o}{\rm C})$  without power deration.

For sustained operation above these conditions, derate by 4% per 1,000 ft (300 m), and 1% per 10  $^{o}F$  (2% per 11  $^{o}C).$
